

The Right to Stop Work initiative is aimed at providing a clear statement of individual QHSE responsibilities and empowerment to stop a job if it is deemed to be unsafe.

Regardless of your position in the company, if there is any DOUBT ABOUT THE SAFETY of a particular task, condition, procedure or process, you are empowered and obligated to STOP THE WORK.

Furthermore, not only are you personally authorized to do so, without threat of adverse retribution, it is your responsibility to do so.

Implementing Stop Work is an act of intervention and should not increase risk or endanger others.

Line management is responsible for supporting this initiative by empowering employees to exercise their right if necessary and report any and all QHSE incidents so that corrective action can be taken to prevent a loss.
