

The long-term business success of AGS depends on our ability to continually improve the quality of our services and products while protecting people and the environment. As a global provider of high quality seismic services, we are committed to continually improving services to our customers. This is part of the continuous development and implementation of the Integrated Operations Management System (iOMS). As part of our continuous performance improvement Initiatives, any non-conformity will be investigated fully to prevent recurrence and to improve performance. Improvement success is monitored and measured against established key performance indicators (KPI's).

This commitment is in the best interests of our customers, our employees and contractors, our stakeholders and the communities in which we live and work. We are committed to:

- Be fair in dealings with all stakeholders.
- Promote the highest ethical standards at our worksites.
- Educate all employees in the use of the iOMS to ensure they are competent.
- Seek to continuously improve the quality of our services to create value and ensure our clients have their needs met or exceeded. We continually measure our performance against stakeholder expectations and annually review our Goals and Objectives in order to deliver on our commitment to quality.
- Set Quality and HSE KPI's for each project so the deliverables are auditable.
- Carry out a review of all projects upon completion to ensure nonconformities are analysed and corrected.
- Evaluate the effectiveness of the iOMS at our worksites to investigate and develop new strategies with which to improve standards of performance.
- Continually improve Quality and HSE management skills of personnel through training and competency assurance monitoring.
- Ensure our established Standards, Guidelines and Work Instructions are adhered to in the execution of our operations.
- Systematically conduct audits and management reviews of internal departments and of our suppliers to ensure that our iOMS delivers quality, is continuously improved upon, and is always effective and efficient.
